

# Jackson Elliott

First Year Computer Science  
Student at Cal Poly

## Education

### Santa Ynez High School

GPA: 3.8

### Cal Poly SLO

Current First Year Computer  
Science Student

## Contact

### Phone

805-470-8892

### Email & Github

jellio23@calpoly.edu  
<https://github.com/JackSD16>

### Address

859 Klamath Rd

## Skills

- Python
- Problem-Solving
- Communication
- Developing
- AWS

## About Me

I am a first-year computer science student from Santa Barbara, California, with experience in coding languages such as Python, HTML, and CSS. My hobbies include soccer, tennis, coding, and skating. I am an aspiring software engineer and am determined to advance my skills in technology while also growing as a person.

## Experience

### Coding

#### Python & AWS

I have been learning and developing code in Python for 8 months. I am comfortable developing applications and functions in Python. In the past 2 months, I have learned to use AWS and created Lambda functions along with other scripts involving S3 and EC2.

### Problem-Solving **Leetcode**

I have been working on solving problems through Leetcode for 4 months and am comfortable at attempting and solving easy questions using Python.

### Project(s)

#### Weather API Browser

My first project in Python is a Weather API browser that connects to OpenWeather's API to display the current temperature, UV index, AQI, "feels like" temperature, and weather conditions for any searched city. The browser was built entirely using Python and PyQt5. The project can be found in my GitHub link provided: (email me for the API Key).

## Job History

### Blenders In The Grass (2022-2023)

At Blenders In The Grass, I gained experience working with food and handling money.

### Tower Pizza (2023-2025)

At Tower Pizza I worked as a cook and delivery driver, gaining experience in handling rushes, communication, and problem-solving.
